

Open App Idea 1 :-

To build an anti smartphone addiction app which will keep track of users screen time and then it will give rewards to them in form of tokens according to their performance which will help users overcome their smartphone addiction and invest their time in doing something productive. Also we can offer them products on our site to buy in exchange for our tokens which will add some real world value to our tokens.

Open App Idea 2(PaySmart) :-

Problem Statement :

Whenever the user tries to buy any product from the online marketplaces available it's hard for them to find the best price of the product since there is a price fluctuation in the price of product and also users don't know what's best price for the product to buy and also they may or may not get to know when there is a price drop on the market places

Solution:

To build an extension for all the online marketplace platforms which will keep track of the price of product which users want to buy and also compare the price of the product on the different marketplaces and then users can choose to make the automatic payment for the product if the price is in the user's buying range using smart contract methods built in our extension. Which will help users by saving money and time. This extension can also be built for the hotels, flights and rental cars.

Blockchain use case:

In our extension smart contract can be used to do the automatic payment when the conditions meet and payment can be done automatically according to the users preference also all the transactions will be stored on the blockchain so it will help to prevent frauds.
